Security warning patch:

This DokuWiki has been patched as follows to suppress the use of a broken function:

```
In "inc/Ui/Admin.php":

 protected function showSecurityCheck() {
     global $conf;
+    return; // This function is broken
```

Soft hyphens:

This DokuWiki adds the following minor feature:

```
super(shy)cali(shy)frag(shy)ilistic
```

The parenthesized word inserts a soft hyphen; i.e., a hyphen that's invisible unless it's needed.

Note: There's a preexisting DokuWiki plugin which does something similar, but it's too old to work.

Setting code-box colors:

To define a DokuWiki code-box type that has particular colors, add a block similar to the following to the file "conf/userstyle.css":

```
pre.salad {
    background-color : #ffffff ;
    color            : #000000 ;
}
```

Replace "salad" with the type name that you'd like to use. Modify the two colors as desired. Finally, clear your browser cache. You can now use the command <code salad> (replacing "salad" with the

appropriate type name) to start a code block with the colors that you've set.

Disable archiving:

This DokuWiki has been patched to attempt to disable archiving by Internet Archive and similar sites. Indexing isn't affected. The patch used was as follows:

Edit "inc/template.php". Look for lines similar to either of the following:

```
$head['meta'][] = ... follow');
$head['meta'][] = ... nofollow');
```

and insert ",noarchive" immediately after "follow" or "nofollow".
